

ACCUMULATOR CHARGING KIT

Maintains System Efficiency

Our 3,000 PSI Accumulator Charging Kit is used to charge bladder, piston or diaphragm accumulators with nitrogen. If your accumulator starts to lose pre-charge pressure, it can cause damage to the accumulator and a loss in the efficiency of your system. By using the 3,000 PSI Accumulator Charging Kit, pre-charge pressure can be checked and maintained to ensure the life of your system. This kit is used for any style of accumulator up to 2,000 PSI pre-charge pressure. Kit includes a double gauge setup with Globe style shutoff, accumulator bleeder valve and one 12' hose with a Schrader valve connection used on "most" American accumulators. Other gas valve connectors available upon request. If higher pre-charge pressure is required, please call for assistance.

Standard Features

- Two Liquid Filled Pressure Gauges with Gauge Protectors
- Globe Valve
- Air Chuck
- Gas Bottle Adapter
- Bleeder Valve
- 12' Hose
